MILROYAL B Pumps

The MILROYAL B metering pump is a robust industrial duty metering pump for use in critical processes in oil and gas, chemical and hydrocarbon processes, water and waste treatment, and in most industries where chemical injection is required.

The MILROYAL design is modular thus allowing it to accept a variety of liquid ends and other options that perfectly tune it to process requirements. Multiplex configurations provide even greater application flexibility.

Capacities listed are for discharge pressures up to 200 PSIG (14 Bar).
Capacity will decrease 0.8% for each 100 PSIG (7 Bar) over 200 PSIG (14 Bar).

NOTES: * For single phase motors, increase horsepower by one size — example: increase ½ hp (0.37kW) to ¾ hp (0.55kW).

† Plastic liquid ends are limited to 150 PSIG (10 Bar) @ 68°F (20°C) and are linearly derated to 65 PSIG (4 Bar) @ 140°F (60°C).

‡ Derate capacity by 5% when applying a diaphragm rupture detection system.

NOTES:

§ Operating pressure is the pressure of the applications system. The internal relief valve is normally set 15% above the operating pressure. If an internal relief valve setting greater than 15% above the operating pressure range is required, select the operating pressure that will accommodate the relief valve setting.

† Flange sizes equal the NPT connection size as noted on the liquid end drawing.

** Refer to the suction pressure table for maximum suction pressure vs. range.

† Options C5, SN, and SE are only available on metallic liquid ends.

†† Special ball check and seat materials are available for severe slurry service. Contact factory.

* Plastic liquid ends are only available with double ball checks.

xxx Plunger diameter 1 in and above only.

xxxx 50 Hz only.

MILROYAL B DISC DIAPHRAGM LIQUID END MODEL CODE

NOTES:

* Operating pressure is the pressure of the applications system. The internal relief valve is normally set 15% above the operating pressure. If an internal relief valve setting greater than 15% above the operating pressure range is required, select the operating pressure that will accommodate the relief valve setting.

† Flange sizes equal the NPT connection size as noted on the liquid end drawing.

1. Double ball checks are standard.

xx 50 Hz only.

NOTES:

- * Plunger diameter codes AF and AH are available in 316 SS only and are for applications requiring pressures over 5,000 psi.
- † Refer to suction pressure table for suction pressure vs. range.
- ‡ Flange sizes equal the NPT connection size as noted on the liquid end drawing.
- § The plunger material will automatically match the liquid end material when selecting packing/plunger material code TM.
- ** Select packing lube GF with packing codes TM & NM. Contact applications engineering for other packing lube selection.
- †† Packing code NM is a standard option for 316 SS liquid ends with plunger diameters of 1 1/8 in through 2 1/2 in plungers.
- ‡‡ Packing/plunger codes AL, TL, & VL are offered on 316 SS liquid ends with 5/16 in through 7/8 in plunger diameters.
- §§ Packing/plunger codes AR, TR, & VR are offered on 316 SS liquid ends with 5/16 in or 7/16 in high pressure plunger diameters.
